

CHILDREN AGED 9 MONTHS WANTED

for communication study

WHAT'S IT ABOUT?

By participating, you will help us to understand the early communication development of children growing up in monolingual and multilingual environments better and to improve the early detection of children with language development disorders.

WHAT CAN YOU EXPECT?

We invite you and your child to five sessions of joint play in our Research Laboratory for Communication and Language (FoKuS) at the Hubland Nord campus of the University of Würzburg. As expense allowance for your time, you will receive 10 euros per session and your child will receive a small gift. Participation in the study is voluntary and can be terminated at any time.

WHO CAN TAKE PART?

All children growing up in one or more languages who are 9 months old at their first appointment and who have not been diagnosed with any pervasive developmental disorder.

Please feel free to contact us earlier so that we can schedule the first appointment.
